

 **NASHUA REGIONAL PLANNING  
COMMISSION**

**TRAFFIC COUNT SUMMARY  
For 2004**

Prepared by the

**NASHUA REGIONAL PLANNING COMMISSION**

This report was prepared by the Nashua Regional Planning Commission with financial assistance from the New Hampshire Department of Transportation and the Federal Highway Administration. The contents of this report reflect the views of the Nashua Regional Planning Commission which is solely responsible for the facts and accuracy of the data presented herein. The contents do not necessarily reflect the official views of the New Hampshire Department of Transportation or the Federal Highway Administration. This report does not constitute a standard, specification or regulation.

## TRAFFIC COUNT SUMMARY FOR 2004

### INTRODUCTION

The Nashua Regional Planning Commission (NRPC) conducted a total of 141 Automatic Traffic Recorder (ATR) counts in 2004. The traffic counts were conducted in cooperation with the New Hampshire Department of Transportation (NHDOT) and are used to support NHDOT's Highway Performance Monitoring System effort. The traffic counts are also used by NRPC to validate the Nashua region's traffic forecasting model.

The NHDOT's six digit coding system for each traffic count location has been adopted by NRPC in order to standardize the compilation of traffic data and to avoid duplicate counts by both agencies. The first digits in the location code represent the town code and the last three digits represent the count location.

According to the Federal Highway Administration (FHWA) Traffic Monitoring Guide, historic traffic count data is useful for the following purposes:

**ENGINEERING** - Highway geometry and design.

**PLANNING** - Determining commuting patterns. Location and design of the highway system and arterial network.

**SAFETY** - Design of traffic control signals.

**PRIVATE SECTOR** - Location of service areas. Determining the commercial viability of areas.

### SECTION ONE: TRAFFIC COUNTS DONE IN 2004 BY NRPC

Table 1 lists traffic counts performed by NRPC in 2004. This table includes the average weekday traffic (Monday-Friday) and the month in which the traffic count was conducted. This table has not been adjusted for axle or seasonal variations. Locations with an asterisk \* are special request counts.

### SECTION TWO: MOST RECENT TRAFFIC VOLUMES AT EACH LOCATION IN THE REGION

Tables 2 through 13 provide the most recent traffic volumes at each location in the NRPC region. These tables include average weekday (Monday-Friday) traffic and average daily (seven day) traffic. The Annual Average Daily Traffic (AADT) becomes available at [www.nhdot.com](http://www.nhdot.com) in the spring of 2005 for the 2004 counting locations.

### NHDOT AADT TRAFFIC VOLUMES at PERMANENT COUNTING STATIONS

The Annual Average Daily Traffic (AADT) at NH DOT permanent stations is available at [www.nhdot.com](http://www.nhdot.com). AADT is an adjusted traffic volume and is defined by NHDOT as the total two-way volume of traffic at a given location during a twenty four hour period representing an average day of the year. When calculating AADT, NHDOT employs seasonal and axle correction factors. The seasonal correction factors account for seasonal variations in traffic. Axle correction factors are necessary because automatic traffic counting machines count traffic based on the number of sets of wheels (axles) that a vehicle has. The axle correction factor assumes that a certain percentage of vehicles have more than two sets of wheels (axles).

## HISTORICAL RECORD OF EACH TRAFFIC COUNT LOCATION IN THE NRPC REGION

This data is available on the NRPC website [www.nashuarpc.org/trafficcount](http://www.nashuarpc.org/trafficcount).
