

# NASHUA REGIONAL PLANNING COMMISSION

## TRAFFIC COUNT SUMMARY For 2005

Prepared by the

**NASHUA REGIONAL PLANNING COMMISSION**

This report was prepared by the Nashua Regional Planning Commission with financial assistance from the New Hampshire Department of Transportation and the Federal Highway Administration. The contents of this report reflect the views of the Nashua Regional Planning Commission which is solely responsible for the facts and accuracy of the data presented herein. The contents do not necessarily reflect the official views of the New Hampshire Department of Transportation or the Federal Highway Administration. This report does not constitute a standard, specification or regulation.

# TRAFFIC COUNT SUMMARY FOR 2005

## INTRODUCTION

The Nashua Regional Planning Commission (NRPC) conducted a total of 161 Automatic Traffic Recorder (ATR) counts in 2005. The traffic counts were conducted in cooperation with the New Hampshire Department of Transportation (NHDOT) and are used to support NHDOT's Highway Performance Monitoring System (HPMS) effort. The traffic counts are also used by NRPC to validate the Nashua region's traffic forecasting model.

The NHDOT's six digit coding system for each traffic count location has been adopted by NRPC in order to standardize the compilation of traffic data and to avoid duplicate counts by both agencies. The first digits in the location code represent the town code and the last three digits represent the count location.

According to the Federal Highway Administration (FHWA) Traffic Monitoring Guide, historic traffic count data is useful for the following purposes:

**ENGINEERING** - Highway geometry and design.

**PLANNING** - Determining commuting patterns. Location and design of the highway system and arterial network.

**SAFETY** - Design of traffic control signals.

**PRIVATE SECTOR** - Location of service areas. Determining the commercial viability of areas.

### 1. SECTION ONE: TRAFFIC COUNTS PERFORMED BY NRPC IN 2005

Table 1 lists traffic counts performed by NRPC in 2005. This table includes the average weekday traffic (Monday-Friday) and the month in which the traffic count was conducted. This table has not been adjusted for axle or seasonal variations. This table includes special request counts or counts completed by NRPC for other transportation projects.

### 2. SECTION TWO: MOST RECENT TRAFFIC VOLUMES AT EACH LOCATION IN THE REGION

Tables 2 through 13 provide the most recent traffic volumes, by Town, at each location in the NRPC region. These tables include average weekday (Monday-Friday) traffic and average daily (seven day) traffic. The tables include only the counts that are requested by NHDOT as part of the HPMS Program.

### NHDOT AADT TRAFFIC VOLUMES at PERMANENT COUNTING STATIONS

The Annual Average Daily Traffic (AADT) at NH DOT permanent stations is available at [www.nhdot.com](http://www.nhdot.com). The data is located in the *Business Information Center* and is contained within the section entitled *Engineers, Contractors and Consultants*. AADT is an adjusted traffic volume and is defined by NHDOT as the total two-way volume of traffic at a given location during a twenty four hour period representing an average day of the year. When calculating AADT, NHDOT employs seasonal and axle correction factors. The seasonal correction factors account for seasonal variations in traffic. Axle correction factors are necessary because automatic traffic counting machines count traffic based on the number of sets of wheels (axles) that a vehicle has. The axle correction factor assumes that a certain percentage of vehicles have more than two sets of wheels (axles).

## HISTORICAL RECORD OF EACH TRAFFIC COUNT LOCATION IN THE NRPC REGION

Current and historical traffic count data for the NRPC region is also available on-line at <http://www.nashuarpc.org/trafficcount>. Users can browse through our member communities to find the resulting data from nearly 2,500 counts collected by NRPC since 1994. Included are yearly counts requested by NHDOT, as well any count performed at the request of NRPC's member communities or for the purposes of NRPC transportation studies.

To view historical counts at any location, begin by selecting a community from the menu. Click on the area of the community that you are interested in. Click on the dot on the area of road closest to the location that you are seeking data for. Please NOTE - This site utilizes pop-up windows. If you have pop-ups turned off, you will want to make them available for this site only. To download or view the report containing only counts performed by NRPC in the most recent calendar year, please visit our [Transportation Publications and Plans](#) section. Plans are also in the works to make counts searchable by street name on the website.
